

MySQL Interview Practice — 20 Queries

Use the following tables for practice:

employees

Column	Type
emp_id	INT AUTO_INCREMENT
emp_name	VARCHAR(50)
department	VARCHAR(50)
salary	DECIMAL(10,2)
experience	INT
status	INT

INSERT INTO employees

(emp_name, department, salary, experience, status)

VALUES

('Ravi', 'IT', 60000, 4, 1),
('Anil', 'HR', 45000, 3, 2),
('Priya', 'Finance', 70000, 6, 4),
('Sneha', 'IT', 85000, 7, 3),
('Kiran', 'Sales', 35000, 2, 1),
('Arjun', 'IT', 55000, 5, 5),
('Divya', 'HR', 40000, 4, 2),
('Rahul', 'Finance', 65000, 8, 6),
('Meena', 'Sales', 30000, 1, 1),
('Suresh', 'IT', 95000, 10, 7),
('Pooja', 'Marketing', 50000, 3, 2),
('Vijay', 'Finance', 48000, 4, 4),
('Neha', 'IT', 72000, 6, 3),
('Amit', 'Sales', 42000, 5, 1),
('Swathi', 'Marketing', 58000, 7, 5);

products

Column	Type
product_id	INT AUTO_INCREMENT
product_name	VARCHAR(50)
price	DECIMAL(10,2)

quantity INT

```
INSERT INTO products
(product_name, price, quantity)
VALUES
('Laptop', 55000, 10),
('Mouse', 800, 25),
('Keyboard', 1500, 15),
('Monitor', 12000, 8),
('Headphones', 2500, 20),
('Webcam', 3500, 12),
('Printer', 15000, 5),
('SSD', 6000, 18),
('RAM', 4000, 30),
('USB Cable', 500, 40),
('Router', 3000, 10),
('Speaker', 4500, 7);
```

Interview Questions

1. Write a query to display the employee name, salary, and salary after adding a fixed bonus of 5000.
2. Write a query to display the employee name, current salary, and salary after applying a 10% increment.
3. Write a query to find employees whose salary is greater than 50000.
4. Write a query to find employees whose salary is between 30000 and 60000 using relational and logical operators.
5. Write a query to find employees who belong to the IT department and have a salary greater than 50000.
6. Write a query to find employees who belong to either the IT or HR department.
7. Write a query to find employees who are not from the Finance department and have more than 3 years of experience.
8. Write a query to display employees whose salary is greater than 40000 or whose experience is greater than 5 years.
9. Write a query to display the remainder when an employee's salary is divided by 1000.
10. Write a query to calculate the total price of each product using price × quantity and display it as total_amount.
11. Write a query to increase the salary of all employees by 10% using an UPDATE statement.
12. Write a query to increase the salary by 15% only for employees belonging to the IT department.
13. Write a query to decrease the price of all products by 5% using a computed UPDATE.
14. Write a query to update the product quantity by adding 10 to the existing quantity for products whose current quantity is less than 20.
15. Create the employees table with emp_id configured as an AUTO_INCREMENT primary key.

16. Write an INSERT statement to add a new employee without explicitly providing the AUTO_INCREMENT employee ID.
17. Create a new table called high_salary_employees containing employees whose salary is greater than 60000, using CREATE TABLE ... AS SELECT.
18. Assume a table named employees_backup already exists. Write a query to copy all employees from employees into employees_backup using INSERT INTO ... SELECT.
19. Write a query to copy only employees from the IT department into an already-existing employees_backup table.
- 20.delete all employees at the IT department.
- 21.delete which product price is less than 1000.
